

Verified Time-Aware Stream Processing

Rafael Castro G. Silva

`razi@di.ku.dk`

Department of Computer Science
University of Copenhagen

02/11/2023

What is this PhD/Status seminar about?

- Distributed Systems
 - Stream processing frameworks
 - Dataflow models
 - Time-Aware Computations
- Formal Methods
 - Verification using proof assistants
 - Isabelle proofs
 - Verified + executable + efficient code
- Formalization of Time-Aware Stream Processing

What is this PhD/Status seminar about?

- Distributed Systems

- Formalization of Time-Aware Stream Processing

- Introduction
- Preliminaries
- Lazy Lists Processors
- Time-Aware Operators
- Case Study
- Next Steps

Introduction

Stream Processing

- Stream Processing: Abstraction for processing data when the input is not completely presented in the beginning of the computation
- Dataflow Model:
 - Directed graph of interconnected operators that perform event-wise transformations
 - Examples: Apache Flink, Apache Samza, Apache Spark, Google Cloud Dataflow, and Timely Dataflow

- Highly Parallel

- Time-Aware Computations
 - Timestamps: Metadata associating the data with some data collection
 - Watermarks: Metadata indicating the completion of a data collection

Stream Processing

- Stream Processing: Abstraction for processing data when the input is not completely presented in the beginning of the computation
- Dataflow Model:

- Time-Aware Computations
 - Timestamps: Metadata associating the data with some data collection
 - Watermarks: Metadata indicating the completion of a data collection

Preliminaries

- Classical higher-order logic (HOL): Simple Typed Lambda Calculus + (Hilbert) axiom of choice + axiom of infinity + rank-1 polymorphism
- Isabelle: A generic proof assistant

- Isabelle/HOL: Isabelle's flavor of HOL
- All functions in Isabelle/HOL must be total

- Classical higher-order logic (HOL): Simple Typed Lambda Calculus + (Hilbert) axiom of choice + axiom of infinity + rank-1 polymorphism
- Isabelle: A generic proof assistant

- Isabelle/HOL: Isabelle's flavor of HOL
- All functions in Isabelle/HOL must be total

Isabelle/HOL: (Co)datatypes

- Datatypes and Codatatypes

```
codatatype (lset: 'a) llist = lnull: LNil | LCons (lhd: 'a) (ltl: 'a llist)  
for map: lmap where ltl LNil = LNil
```

- Examples:

- LNil
- LCons 1 (LCons 2 (LCons 3 LNil))
- LCons 0 (LCons 0 (LCons 0 (...)))

- Induction principle assuming membership in the lazy list

- Coinductive principle for lazy list equality:

- Show that there is a pair of goggles that makes them to look the same, which implies that:
 - The first lazy list is empty iff second is
 - They have the same head
 - Their tail looks the same

Isabelle/HOL: (Co)datatypes

- Datatypes and Codatatypes

```
codatatype (lset: 'a) llist = Inul: LNil | LCons (lhd: 'a) (ltl: 'a llist)  
for map: lmap where ltl LNil = LNil
```

- Examples:

- LNil

- LCons 1 (LCons 2 (LCons 3 LNil))

- LCons 0 (LCons 0 (LCons 0 (...)))

- Induction principle assuming membership in the lazy list

- Coinductive principle for lazy list equality:

- Show that there is a pair of goggles that makes them to look the same, which implies that:
 - The first lazy list is empty iff second is
 - They have the same head
 - Their tail looks the same

Isabelle/HOL: (Co)datatypes

- Datatypes and Codatatypes

```
codatatype (lset: 'a) llist = lnull: LNil | LCons (lhd: 'a) (ltl: 'a llist)  
  for map: lmap where ltl LNil = LNil
```

- Examples:

- LNil
- LCons 1 (LCons 2 (LCons 3 LNil))
- LCons 0 (LCons 0 (LCons 0 (...)))

- Induction principle assuming membership in the lazy list

- Coinductive principle for lazy list equality:

- Show that there is a pair of goggles that makes them to look the same, which implies that:
 - The first lazy list is empty iff second is
 - They have the same head
 - Their tail looks the same

Isabelle/HOL: (Co)datatypes

- Datatypes and Codatatypes

```
codatatype (lset: 'a) llist = lnull: LNil | LCons (lhd: 'a) (ltl: 'a llist)  
  for map: lmap where ltl LNil = LNil
```

- Examples:

- LNil

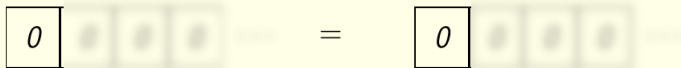

- LCons 1 (LCons 2 (LCons 3 LNil))

- LCons 0 (LCons 0 (LCons 0 (...)))

- Induction principle assuming membership in the lazy list

- Coinductive principle for lazy list equality:

- Show that there is a pair of goggles that makes them to look the same, which must imply that:
 - The first lazy list is empty iff second is
 - They have the same head
 - Their tail looks the same

$$\boxed{0} \dots = \boxed{0} \dots$$

Isabelle/HOL: (Co)datatypes

- Datatypes and Codatatypes

```
codatatype (lset: 'a) llist = lnull: LNil | LCons (lhd: 'a) (ltl: 'a llist)  
  for map: lmap where ltl LNil = LNil
```

- Examples:

- LNil

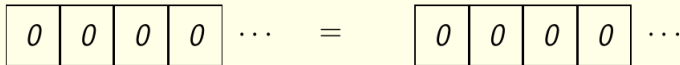

- LCons 1 (LCons 2 (LCons 3 LNil))

- LCons 0 (LCons 0 (LCons 0 (...)))

- Induction principle assuming membership in the lazy list

- Coinductive principle for lazy list equality:

- Show that there is a pair of goggles that makes them to look the same, which implies that:
 - The first lazy list is empty iff second is
 - They have the same head
 - Their tail looks the same

- Recursion

```
fun lshift :: 'a list  $\Rightarrow$  'a llist  $\Rightarrow$  'a llist (infixr @@ 65) where  
  lshift [] lxs = lxs  
| lshift (x # xs) lxs = LCons x (lshift xs lxs)
```

- While Combinator

```
definition while_option :: ('a  $\Rightarrow$  bool)  $\Rightarrow$  ('a  $\Rightarrow$  'a)  $\Rightarrow$  'a  $\Rightarrow$  'a option where  
  while_option b c s = ...
```

- While rule for invariant reasoning (hoare-style):
 - There is something that holds before a step; that thing still holds after the step

Isabelle/HOL: Corecursion and Friends

- Corecursion is like recursion, but instead of always eventually reducing an argument it always eventually produces something

- Corec:

```
corec lapp :: 'a llist  $\Rightarrow$  'a llist  $\Rightarrow$  'a llist where  
  lapp lxs lys = case lxs of LNil  $\Rightarrow$  lys | LCons x lxs'  $\Rightarrow$  LCons x (lapp lxs' lys)
```

- Friendly function

- Preserves productivity: it may consume at most one constructor to produce one constructor.

```
friend_of_corec lshift where  
  xs @@ lxs = (case xs of  
    []  $\Rightarrow$  (case lxs of LNil  $\Rightarrow$  LNil | LCons x lxs'  $\Rightarrow$  LCons x lxs')  
  | x#xs'  $\Rightarrow$  LCons x (xs' @@ lxs))  
  by (auto split: list.splits llist.splits) (transfer_prover)
```

```
lconcat lxs = case lxs of LNil  $\Rightarrow$  LNil | LCons xs lxs'  $\Rightarrow$  lshift xs (lconcat lxs')
```

- Coinduction up to congruence: Coinduction for Lazy list equality can be extended to compare an entire finite prefix through a congruence relation

Isabelle/HOL: Corecursion and Friends

- Corecursion is like recursion, but instead of always eventually reducing an argument it always eventually produces something
- Corec:

```
corec lapp :: 'a llist  $\Rightarrow$  'a llist  $\Rightarrow$  'a llist where  
  lapp xs lys = case xs of LNil  $\Rightarrow$  lys | LCons x xs'  $\Rightarrow$  LCons x (lapp xs' lys)
```

- Friendly function
 - Preserves productivity: it may consume at most one constructor to produce one constructor.

```
friend_of_corec lshift where  
  xs @@ xs = (case xs of  
    []  $\Rightarrow$  (case xs of LNil  $\Rightarrow$  LNil | LCons x xs'  $\Rightarrow$  LCons x xs')  
  | x#xs'  $\Rightarrow$  LCons x (xs' @@ xs))  
  by (auto split: list.splits llist.splits) (transfer_prover)
```

```
lconcat xs = case xs of LNil  $\Rightarrow$  LNil | LCons xs xs'  $\Rightarrow$  lshift xs (lconcat xs')
```

- Coinduction up to congruence: Coinduction for Lazy list equality can be extended to compare an entire finite prefix through a congruence relation

Isabelle/HOL: Corecursion and Friends

- Corecursion is like recursion, but instead of always eventually reducing an argument it always eventually produces something
- Corec:

```
corec lapp :: 'a llist  $\Rightarrow$  'a llist  $\Rightarrow$  'a llist where  
  lapp xs lys = case xs of LNil  $\Rightarrow$  lys | LCons x xs'  $\Rightarrow$  LCons x (lapp xs' lys)
```

- Friendly function
 - Preserves productivity: it may consume at most one constructor to produce one constructor.

```
friend_of_corec lshift where  
  xs @@ xs = (case xs of  
    []  $\Rightarrow$  (case xs of LNil  $\Rightarrow$  LNil | LCons x xs'  $\Rightarrow$  LCons x xs')  
  | x#xs'  $\Rightarrow$  LCons x (xs' @@ xs))  
  by (auto split: list.splits llist.splits) (transfer_prover)
```

```
lconcat xs = case xs of LNil  $\Rightarrow$  LNil | LCons xs xs'  $\Rightarrow$  lshift xs (lconcat xs')
```

- Coinduction up to congruence: Coinduction for Lazy list equality can be extended to compare an entire finite prefix through a congruence relation

Isabelle/HOL: Corecursion and Friends

- Corecursion is like recursion, but instead of always eventually reducing an argument it always eventually produces something
- Corec:

```
corec lapp :: 'a llist  $\Rightarrow$  'a llist  $\Rightarrow$  'a llist where  
  lapp xs lys = case xs of LNil  $\Rightarrow$  lys | LCons x xs'  $\Rightarrow$  LCons x (lapp xs' lys)
```

- Friendly function
 - Preserves productivity: it may consume at most one constructor to produce one constructor.

```
friend_of_corec lshift where  
  xs @@ xs = (case xs of  
    []  $\Rightarrow$  (case xs of LNil  $\Rightarrow$  LNil | LCons x xs'  $\Rightarrow$  LCons x xs')  
  | x#xs'  $\Rightarrow$  LCons x (xs' @@ xs))  
  by (auto split: list.splits llist.splits) (transfer_prover)
```

```
lconcat xs = case xs of LNil  $\Rightarrow$  LNil | LCons xs xs'  $\Rightarrow$  lshift xs (lconcat xs')
```

- Coinduction up to congruence: Coinduction for Lazy list equality can be extended to compare an entire finite prefix through a congruence relation

Isabelle/HOL: (Co)inductive Predicates

- Inductive predicate
 - Finite number of introduction rule applications

```
inductive in_llist :: 'a  $\Rightarrow$  'a llist  $\Rightarrow$  bool where  
  In_llist: in_llist x (LCons x lxs)  
  | Next_llist: in_llist x lxs  $\Rightarrow$  in_llist x (LCons y lxs)  
  
in_llist 2 (LCons 1 (LCons (2 (...))))
```

- Coinductive predicate
 - Infinite number of introduction rule applications

```
coinductive lprefix :: 'a llist  $\Rightarrow$  'a llist  $\Rightarrow$  bool where  
  LNil_lprefix: lprefix LNil lxs  
  | LCons_lprefix: lprefix lxs lxs  $\Rightarrow$  lprefix (LCons x lxs) (LCons x lxs)  
  
lprefix (LCons 1 (LCons (2 (...)))) (LCons 1 (LCons (2 (...))))
```

- Coinduction principle
- But not coinduction up to congruence for free

Isabelle/HOL: (Co)inductive Predicates

- Inductive predicate
 - Finite number of introduction rule applications

```
inductive in_llist :: 'a  $\Rightarrow$  'a llist  $\Rightarrow$  bool where  
  In_llist: in_llist x (LCons x lxs)  
  | Next_llist: in_llist x lxs  $\Rightarrow$  in_llist x (LCons y lxs)  
  
in_llist 2 (LCons 1 (LCons (2 (...))))
```

- Coinductive predicate
 - Infinite number of introduction rule applications

```
coinductive lprefix :: 'a llist  $\Rightarrow$  'a llist  $\Rightarrow$  bool where  
  LNil_lprefix: lprefix LNil lxs  
  | LCons_lprefix: lprefix lxs lxs  $\Rightarrow$  lprefix (LCons x lxs) (LCons x lxs)  
  
lprefix (LCons 1 (LCons (2 (...)))) (LCons 1 (LCons (2 (...))))
```

- Coinduction principle
- But not coinduction up to congruence for free

Isabelle/HOL: (Co)inductive Predicates

- Inductive predicate
 - Finite number of introduction rule applications

```
inductive in_llist :: 'a  $\Rightarrow$  'a llist  $\Rightarrow$  bool where  
  In_llist: in_llist x (LCons x lxs)

lprefix (LCons 1 (LCons (2 (...)))) (LCons 1 (LCons (2 (...))))
```

- Coinduction principle
- But not coinduction up to congruence for free

Lazy Lists Processors

Operator formalization

- Operator as a codatatype
 - Taking `'i` as the input type, and `'o` as the output type:
`codatatype ('o, 'i) op = Logic (apply: ('i \Rightarrow ('o, 'i) op \times 'o list))`
 - Infinite trees: applying the selector `apply` “walks” a branch of the tree

Operator formalization

- Operator as a codatatype
 - Taking `'i` as the input type, and `'o` as the output type:
`codatatype ('o, 'i) op = Logic (apply: ('i \Rightarrow ('o, 'i) op \times 'o list))`
 - Infinite trees: applying the selector `apply` “walks” a branch of the tree

- Produce function: applies the logic (co)recursively throughout a lazy list

definition $\text{produce}_1' \text{ op } lxs = \text{while_option}$

$(\lambda(\text{op}, lxs). \neg \text{Inull } lxs \wedge \text{snd } (\text{apply } \text{op } (\text{lhs } lxs)) = [])$

$(\lambda(\text{op}, lxs). (\text{fst } (\text{apply } \text{op } (\text{lhs } lxs)), \text{tl } lxs)) (\text{op}, lxs)$

definition $\text{produce}_1 \text{ op } lxs =$

$(\text{case } \text{produce}_1' \text{ op } lxs \text{ of } \text{None} \Rightarrow \text{None}$

$| \text{Some } (\text{op}', lxs') \Rightarrow \text{if } \text{Inull } lxs' \text{ then } \text{None} \text{ else}$

$\text{let } (\text{op}'', \text{out}) = \text{apply } \text{op}' (\text{lhs } lxs') \text{ in } \text{Some } (\text{op}'', \text{hd } \text{out}, \text{tl } \text{out}, \text{tl } lxs'))$

corec **produce** **where**

$\text{produce } \text{op } lxs = (\text{case } \text{produce}_1 \text{ op } lxs \text{ of } \text{None} \Rightarrow \text{LNil}$

$| \text{Some } (\text{op}', x, xs, lxs') \Rightarrow \text{LCons } x \text{ (xs @@ produce } \text{op}' \text{ lxs')})$

- produce_1 has an induction principle based on the while invariant rule

- Produce function: applies the logic (co)recursively throughout a lazy list

definition $\text{produce}_1' \text{ op } lxs = \text{while_option}$

$(\lambda(\text{op}, lxs). \neg \text{Inull } lxs \wedge \text{snd } (\text{apply } \text{op } (\text{lhs } lxs))) = [])$

$(\lambda(\text{op}, lxs). (\text{fst } (\text{apply } \text{op } (\text{lhs } lxs)), \text{tl } lxs)) (\text{op}, lxs)$

definition $\text{produce}_1 \text{ op } lxs =$

$(\text{case } \text{produce}_1' \text{ op } lxs \text{ of } \text{None} \Rightarrow \text{None}$

$| \text{Some } (\text{op}', lxs') \Rightarrow \text{if } \text{Inull } lxs' \text{ then } \text{None} \text{ else}$

$\text{let } (\text{op}'', \text{out}) = \text{apply } \text{op}' (\text{lhs } lxs') \text{ in } \text{Some } (\text{op}'', \text{hd } \text{out}, \text{tl } \text{out}, \text{tl } lxs'))$

corec **produce** **where**

$\text{produce } \text{op } lxs = (\text{case } \text{produce}_1 \text{ op } lxs \text{ of } \text{None} \Rightarrow \text{LNil}$

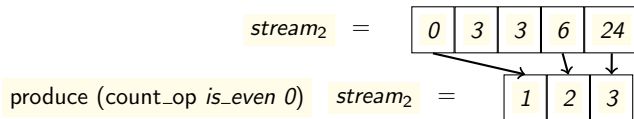

$| \text{Some } (\text{op}', x, xs, lxs') \Rightarrow \text{LCons } x (xs \text{ @@ } \text{produce } \text{op}' lxs'))$

- produce_1 has an induction principle based on the while invariant rule

Operators: Count

- Example:

```
corec count_op where count_op P n =  
  Logic (λe. if P e then (count_op P (n + 1), [n+1]) else (count_op P n, []))
```

Sequential Composition

- Sequential composition: take the output of the first operator and give it as input to the second operator.

```
definition fproduce  $op\ xs = \text{fold } (\lambda e\ (op,\ out)).$   
  let  $(op',\ out') = \text{apply } op\ e\ \text{in } (op',\ out\ @\ out')$  xs (op, [])  
corec comp_op where  
  comp_op  $op_1\ op_2 = \text{Logic } (\lambda ev.$   
    let  $(op_1',\ out) = \text{apply } op_1\ ev;$   $(op_2',\ out') = \text{fproduce } op_2\ out$   
    in  $(\text{comp\_op } op_1'\ op_2',\ out')$ 
```

Sequential Composition: Correctness

- Correctness:

$\text{produce } (\text{comp_op } op_1 \ op_2) \ lxs = \text{produce } op_2 \ (\text{produce } op_1 \ lxs)$

- Proof: coinduction principle for lazy list equality and produce_1 induction principle
 - Generalization: we must be able to reason about elements in arbitrary positions

corec skip_op where

$\text{skip_op } op \ n = \text{Logic } (\lambda ev. \text{let } (op', out) = \text{apply } op \ ev \text{ in}$
if $\text{length } out < n$ then $(\text{skip_op } op' \ (n - \text{length } out), [])$
else $(op', \text{drop } n \ out))$

- Correctness: Coinduction up to congruence for lazy list equality

Sequential Composition: Correctness

- Correctness:

$\text{produce } (\text{comp_op } op_1 \ op_2) \ lxs = \text{produce } op_2 \ (\text{produce } op_1 \ lxs)$

- Proof: coinduction principle for lazy list equality and produce_1 induction principle
 - Generalization: we must be able to reason about elements in arbitrary positions

corec skip_op where

$\text{skip_op } op \ n = \text{Logic } (\lambda ev. \text{let } (op', out) = \text{apply } op \ ev \text{ in}$
if $\text{length } out < n$ then $(\text{skip_op } op' \ (n - \text{length } out), [])$
else $(op', \text{drop } n \ out))$

- Correctness: Coinduction up to congruence for lazy list equality

Sequential Composition: Correctness

- Correctness:

$\text{produce} (\text{comp_op } op_1 \text{ } op_2) \text{ } lxs = \text{produce } op_2 (\text{produce } op_1 \text{ } lxs)$

- Proof: coinduction principle for lazy list equality and produce_1 induction principle
 - Generalization: we must be able to reason about elements in arbitrary positions

corec skip_op where

$\text{skip_op } op \text{ } n = \text{Logic } (\lambda ev. \text{let } (op', out) = \text{apply } op \text{ } ev \text{ in}$
 if $\text{length } out < n$ then $(\text{skip_op } op' \text{ } (n - \text{length } out), [])$
 else $(op', \text{drop } n \text{ } out))$

- Correctness: Coinduction up to congruence for lazy list equality

Sequential Composition: Correctness

- Correctness:

$\text{produce} (\text{comp_op } op_1 \text{ } op_2) \text{ } lxs = \text{produce } op_2 (\text{produce } op_1 \text{ } lxs)$

- Proof: coinduction principle for lazy list equality and produce_1 induction principle
 - Generalization: we must be able to reason about elements in arbitrary positions

corec skip_op where

$\text{skip_op } op \text{ } n = \text{Logic } (\lambda ev. \text{let } (op', out) = \text{apply } op \text{ } ev \text{ in}$
if $\text{length } out < n$ then $(\text{skip_op } op' \text{ } (n - \text{length } out), [])$
else $(op', \text{drop } n \text{ } out))$

- Correctness: Coinduction up to congruence for lazy list equality

Time-Aware Operators

- Time-Aware lazy lists

```
datatype ('t::order, 'd) event = DT (tmp: 't) (data: 'd) | WM (wmk: 't)
```

- Generalization to partial orders
 - Cycles
 - Operators with multiple inputs

- Time-Aware lazy lists

```
datatype ('t::order, 'd) event = DT (tmp: 't) (data: 'd) | WM (wmk: 't)
```

- Generalization to partial orders
 - Cycles
 - Operators with multiple inputs

Monotone Time-Aware Streams

- Monotone: watermarks do not go back in time

coinductive monotone $:: ('t::\text{order}, 'd) \text{ event llist} \Rightarrow 't \text{ set} \Rightarrow \text{bool}$ where

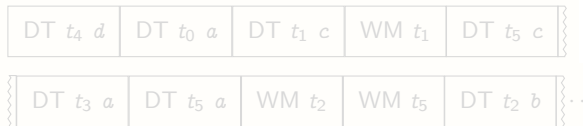

LNil: monotone LNil W

| LConsR: $(\forall wm' \in W. \neg wm' \geq wm) \longrightarrow \text{monotone } lxs (\{wm\} \cup W) \longrightarrow$
monotone (LCons (WM wm) lxs) W

| LConsL: $(\forall wm \in W. \neg wm \geq t) \longrightarrow \text{monotone } lxs W \longrightarrow$
monotone (LCons (DT $t d$) lxs) W

- Up to congruence coinduction principle
- Example:

$stream_3 =$

Monotone Time-Aware Streams

- Monotone: watermarks do not go back in time

coinductive monotone $:: ('t::order, 'd) \text{ event llist} \Rightarrow 't \text{ set} \Rightarrow \text{bool}$ where

LNil: monotone LNil W

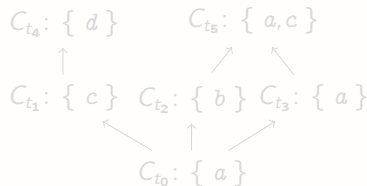

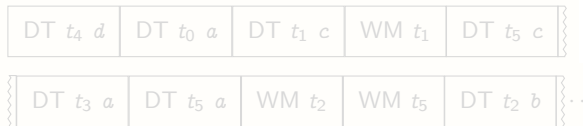

| LConsR: $(\forall wm' \in W. \neg wm' \geq wm) \longrightarrow \text{monotone } lxs (\{wm\} \cup W) \longrightarrow$
monotone (LCons (WM wm) lxs) W

| LConsL: $(\forall wm \in W. \neg wm \geq t) \longrightarrow \text{monotone } lxs W \longrightarrow$
monotone (LCons (DT $t d$) lxs) W

- Up to congruence coinduction principle

- Example:

$stream_3 =$

Monotone Time-Aware Streams

- Monotone: watermarks do not go back in time

coinductive monotone $:: ('t::\text{order}, 'd) \text{ event llist} \Rightarrow 't \text{ set} \Rightarrow \text{bool}$ where

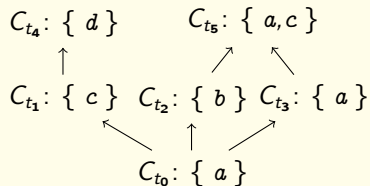

LNil: monotone LNil W

| LConsR: $(\forall wm' \in W. \neg wm' \geq wm) \longrightarrow \text{monotone } lxs (\{wm\} \cup W) \longrightarrow$
 monotone (LCons (WM wm) lxs) W

| LConsL: $(\forall wm \in W. \neg wm \geq t) \longrightarrow \text{monotone } lxs W \longrightarrow$
 monotone (LCons (DT $t d$) lxs) W

- Up to congruence coinduction principle
- Example:

$stream_3 =$

Productive Time-Aware Streams

- Productive: always eventually allows the production

- Batching operators: accumulate data until its completion
- Data is always eventually completed by some watermark

coinductive productive where

LFinite: lfinite $lxs \longrightarrow$ productive lxs

| EnvWM: \neg lfinite $lxs \longrightarrow (\exists u \in \text{vimage WM } (\text{lset } lxs). u \geq t) \longrightarrow$
productive $lxs \longrightarrow$ productive (LCons (DT t d) lxs)

| SkipWM: \neg lfinite $lxs \longrightarrow$ productive $lxs \longrightarrow$
productive (LCons (WM t) lxs)

- Up to congruence coinduction principle

Productive Time-Aware Streams

- Productive: always eventually allows the production
 - Batching operators: accumulate data until its completion
 - Data is always eventually completed by some watermark

coinductive productive where

LFinite: lfinite $lxs \rightarrow$ productive lxs

| EnvWM: \neg lfinite $lxs \rightarrow (\exists u \in \text{vimage WM } (\text{lset } lxs). u \geq t) \rightarrow$
productive $lxs \rightarrow$ productive (LCons (DT t d) lxs)

| SkipWM: \neg lfinite $lxs \rightarrow$ productive $lxs \rightarrow$
productive (LCons (WM t) lxs)

- Up to congruence coinduction principle

Productive Time-Aware Streams

- Productive: always eventually allows the production
 - Batching operators: accumulate data until its completion
 - Data is always eventually completed by some watermark

coinductive productive **where**

$\text{LFinite}: \text{lfinite } lxs \longrightarrow \text{productive } lxs$

| $\text{EnvWM}: \neg \text{lfinite } lxs \longrightarrow (\exists u \in \text{vimage WM } (\text{lset } lxs). u \geq t) \longrightarrow$
 $\text{productive } lxs \longrightarrow \text{productive } (\text{LCons } (\text{DT } t \ d) \ lxs)$

| $\text{SkipWM}: \neg \text{lfinite } lxs \longrightarrow \text{productive } lxs \longrightarrow$
 $\text{productive } (\text{LCons } (\text{WM } t) \ lxs)$

- Up to congruence coinduction principle

Productive Time-Aware Streams

- Productive: always eventually allows the production
 - Batching operators: accumulate data until its completion
 - Data is always eventually completed by some watermark

coinductive productive **where**

$\text{LFinite}: \text{lfinite } lxs \longrightarrow \text{productive } lxs$

| $\text{EnvWM}: \neg \text{lfinite } lxs \longrightarrow (\exists u \in \text{vimage WM } (\text{lset } lxs). u \geq t) \longrightarrow$
 $\text{productive } lxs \longrightarrow \text{productive } (\text{LCons } (\text{DT } t \ d) \ lxs)$

| $\text{SkipWM}: \neg \text{lfinite } lxs \longrightarrow \text{productive } lxs \longrightarrow$
 $\text{productive } (\text{LCons } (\text{WM } t) \ lxs)$

- Up to congruence coinduction principle

Building Blocks: Batch Operator

- Building Blocks: reusable operators
 - Batching and incremental computations
- `batch_op` : produces batches of accumulated data

`corec batch_op where`

```
batch_op buf = Logic (λev. case ev of DT t d ⇒ (batch_op (buf @ [(t, d)]), [])  
| WM wm ⇒ if ∃(t, d) ∈ set buf. t ≤ wm  
    then let out = filter (λ(t, _). t ≤ wm) buf;  
           buf' = filter (λ(t, _). ¬ t ≤ wm) buf  
           in (batch_op buf', [DT wm out, WM wm])  
    else (batch_op buf, [WM wm]))
```

Building Blocks: Batch Operator

- Building Blocks: reusable operators
 - Batching and incremental computations
- `batch_op` : produces batches of accumulated data

corec `batch_op` **where**

```
batch_op buf = Logic ( $\lambda$ ev. case ev of DT  $t\ d \Rightarrow$  (batch_op (buf @ [(t, d)]), [])  
| WM wm  $\Rightarrow$  if  $\exists(t, d) \in \text{set } \text{buf}. t \leq wm$   
  then let out = filter ( $\lambda(t, \_). t \leq wm$ ) buf;  
    buf' = filter ( $\lambda(t, \_). \neg t \leq wm$ ) buf  
    in (batch_op buf', [DT wm out, WM wm])  
  else (batch_op buf, [WM wm]))
```

Batch Operator: Soundness

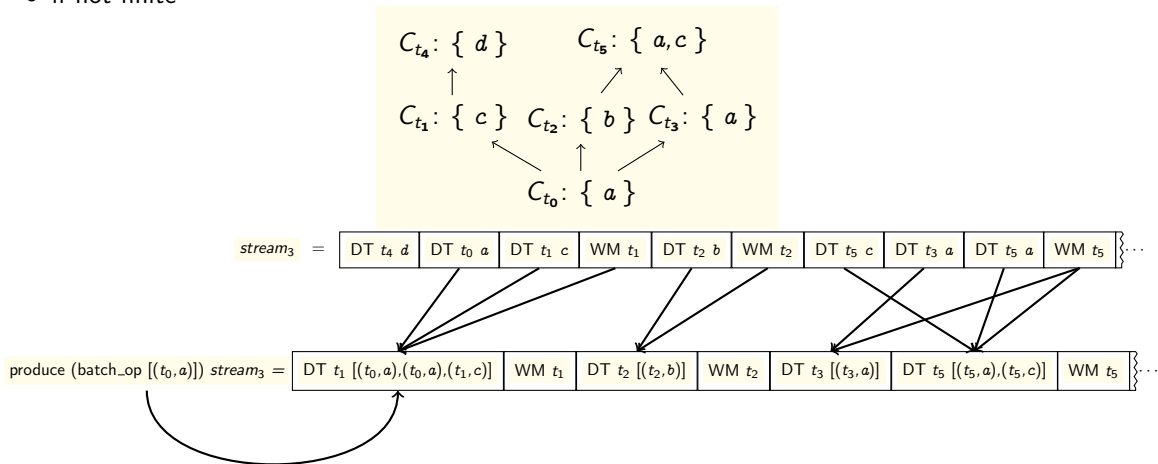

- Given a monotone time-aware stream

- Proof: `Iset` induction, and generalization with `skip_op`

Batch Operator: Completeness

- Given a monotone and productive time-aware stream
- if not finite

- Proof: induction over the position (nat) of the element in the input, and soundness of `batch_op`

Batch Operator: Monotone and productive preservation

- The operators must preserve monotone and productive, so we can compose it with something that needs these properties!

$$\text{monotone } lxs \ W \longrightarrow \text{monotone } (\text{produce } (\text{batch_op } buf) \ lxs) \ W \quad (1)$$

$$\text{productive } lxs \longrightarrow \text{productive } (\text{produce } (\text{batch_op } buf) \ lxs) \quad (2)$$

- Proof: coinduction up to congruence

Building Blocks: Incremental Operator

- `incr_op` : produces accumulated batches of accumulated data

corec `incr_op` **where**

```
incr_op buf = Logic ( $\lambda$  ev. case ev of DT wm batch  $\Rightarrow$   
  let out = map ( $\lambda$  t. DT t (buf @ batch)) (remdups (map fst batch))  
  in (incr_op (buf @ batch), out)  
  | WM wm  $\Rightarrow$  (incr_op buf, [WM wm]))
```
